SKILLS

AI
AI-assisted development with Claude Code (coding agents, MCP tools, custom skills, project rules), prompt and spec writing, AI code review backed by tests; on-device ML (ML Kit), speech recognition (Arabic / English), neural text-to-speech, audio analysis (MFCC, DTW)

Android
Kotlin, Java, Jetpack Compose, Kotlin & Compose Multiplatform (iOS), Coroutines & Flow, Hilt / Dagger, Room, SQLite, OpenGL ES 3D, WebRTC

Architecture
MVVM, MVP, Clean Architecture, Repository pattern, modular SDK / AAR integration

Payments & POS
EMV contact / contactless, PIN, reversals, DCC, surcharging, QR payments, settlement, TMS, PCI-DSS practices

Senior Android Developer with 12 years in software development (since 2014), the last nine building Android apps. I specialise in payment terminals: the apps that read cards, talk to the bank, print receipts and connect to cash registers and vending machines. I use AI every day, running coding agents such as Claude Code under clear project rules and verifying their work with tests on real devices, and I build AI features such as on-device ML and speech into apps. I care about reliable code, real-device testing and clear delivery. Certified Scrum Master and Product Owner, and available for freelance Android, Windows and website projects.

Experience

Senior Android Developer
Jun 2024 – Present

areeba (Areeba Technologies) · Beirut, Lebanon

- Lead Android development of the POS app running on Nexgo and Kozen payment terminals (UN20, N62, N92 and more), used by merchants across several markets.
- Delivered payment features end to end: Dynamic Currency Conversion, surcharging, QR payments, tips and settlement, on top of EMV contact, contactless and magstripe flows with PIN and reversals, following PCI-DSS practices.
- Turned the terminal into the card reader inside **vending machines over MDB**: moved to 32-bit pricing so high-value items charge correctly, added automatic refunds when a paid item isn't released or the result is lost, and a self-healing connection to the vending service.
- Integrated cash registers (ECR) over serial, USB, Bluetooth bases and Wi-Fi, and the Terminal Management System for remote configuration and updates.
- Led **on-site integrations** with duty-free, quick-service restaurant and vending clients (coffee and perfume machines): diagnosed field issues from device logs and bus captures, and shipped fixes for lost results, reconnects and app hangs.
- Brought **AI-assisted development** into daily work with Claude Code: project rules, custom skills and tool connections for log analysis, debugging and testing, with every change verified by unit tests and on real terminals.
- Built my own **test simulators** for cash registers and cloud payment links (Windows and Mac), so the team can test without the client's hardware.
- Refactored to MVVM, the repository pattern and Clean Architecture, **reducing crashes by 40%**; used Kotlin coroutines to cut transaction latency.
- Built features with Firebase (Crashlytics, Analytics, Remote Config, push), modular SDK / AAR dependencies with Hilt / Dagger, and unit-tested business logic.
- Built responsive payment screens for phone-size and 480×480 terminals in English, Arabic and Kurdish.
- Ship releases with backend, QA and product teams in Agile ceremonies (e.g. versions 2.4.9, 2.5.14, 1.47.1).

SKILLS (CONTINUED)

Devices & protocols

Nexgo & Kozen SDKs, ECR (serial, USB, Bluetooth base, Wi-Fi / WebSocket), MDB vending, RS232, receipt printers

Web

Websites and web apps: HTML, CSS, JavaScript, PHP, ASP.NET, responsive design, SEO, GitHub Pages

Backend & desktop

C#, .NET, WPF, WinForms, Python, PowerShell, REST APIs, WebSocket, SQL, MySQL, Oracle

Tools & process

Git, CI/CD, Firebase, unit testing, Android Studio, Visual Studio, Agile / Scrum

EDUCATION

B.S. in Computer Science
American University of Science & Technology (AUST), Beirut · Dept. of Computer Science & Engineering · 2010 – 2014 (conferred Feb 2015)

Participant, 10th Annual Engineering & Computer Science Project Exhibition, AUST, 2014

CERTIFICATIONS

Scrum Master · Scrum Arabia · 2014

Scrum Product Owner · Scrum Arabia · 2014

Investigating DNS Abuse / Misuse for Law Enforcement · AUST Cyber Crime Center & ICANN · 2014

CCNA Discovery: Networking for Home & Small Businesses · Cisco Networking Academy · 2013

Java Certification

Experience (continued)

Mid-Level Android Developer
Oct 2017 – May 2024
BMB Group (Move) · Beirut, Lebanon

- Designed and delivered a B2B merchandising app from scratch to deployment, owning the full lifecycle from architecture to customer delivery.
- Built it with MVVM and design patterns such as Strategy, Chain of Responsibility and Repository, keeping the code clean, scalable and maintainable.
- Solved complex data synchronisation with an offline-first model on SQLite, with no data loss between online and offline states.
- Integrated payment, reporting and analytics SDKs, and stable receipt and report printing across printer models.
- Mentored junior developers and introduced unit testing, CI pipelines and peer reviews.

Junior Software Developer
Dec 2014 – Sep 2017
Code Fish · Beirut, Lebanon

- Managed HRMS projects for clients including GlobeMed, Jubaili Co. and iEngineering.
- Delivered backend systems in C# and .NET.

Software Developer (Internship)
Jul 2014 – Dec 2014
Code Fish · Beirut, Lebanon

Customer Support Agent
Dec 2013 – Mar 2014
Terra Net · Beirut, Lebanon

Projects

Fly Beirut Taxi
2026
Freelance · Android & iOS · Kotlin Multiplatform, Compose, Firebase

Motorbike-taxi and parcel delivery app for a Beirut taxi office, with rider, driver and manager roles in Arabic and English. Server-side fares, smart dispatch with manager assignment and approval, live tracking, cash or card payment, and monthly financial reports.

Beirut Strike
2026
Personal · Android game · Kotlin, OpenGL ES, Firebase, WebRTC

Online 3D team shooter set in real Beirut streets generated from OpenStreetMap and elevation data, with a custom OpenGL ES engine. It has live multiplayer rooms, team voice chat, 12 guns, 20 ranks and the player's own face on their soldier (ML Kit). Closed testing complete; release on Google Play in a few days.

ECR Simulator & Wireless ECR Simulator
2026
Windows & Mac · C#, WinForms / WPF, Python, REST, WebSocket · AI-assisted

Cash-register simulators that test a payment terminal end to end without the client's hardware: four register protocols over a Bluetooth base or cable, plus a merchant and virtual-terminal simulator for a cloud payment link with a smart-fridge door flow. Built with an AI coding agent, protocol logic unit-tested; public on GitHub.

LANGUAGES

Arabic · Native

English · Excellent

French · Very good

ALSO KNOWN

C++, XML, Assembly, Eclipse, Adobe Suite

Available on request.

Projects (continued)

Makharij: Quran pronunciation coach

2026

Personal · Android & iOS · Compose Multiplatform · in development

Shows where each Arabic letter is pronounced with an animated 3D head and tongue drawn by a custom renderer in shared Kotlin, compares correct and wrong pronunciations side by side, and scores a student's recording against a teacher's (MFCC + DTW).

Vending MDB Simulator

2026

Windows desktop app · C#, WPF, RS232

A Windows app that plays a vending machine on the MDB bus, so a payment terminal can be tested without the real machine. Covers every outcome: successful vend, sold-out slot, fridge door open, motor jam, power cut, cancel, decline and timeout, with a live log that translates each byte into plain words.

C# WPF MDB Serial

Personal website

2026

ahmadellahib.dev

Designed and built my portfolio and freelance website with service pages, structured data and Google Search Console setup: responsive, light and dark themes, fast to load, hosted on GitHub Pages.

HTML CSS JavaScript SEO

Freelance

Available for **Android apps** (Kotlin, Jetpack Compose), **Windows desktop apps** (C#, WPF), **websites and web apps** (responsive, fast, easy to update), **POS and payment terminal apps**, **device integrations** (MDB, serial, USB, printers), **AI features in apps** and **rescue and maintenance** of existing apps.
